conception prior to May 17, 2002, attached hereto and incorporated by reference, is Exhibit A.

6. Exhibit A is a confidential internal Invention Disclosure Record of Hewlett-Packard Company. This Invention Disclosure Record is entitled "MRAM Array With Reference Layer Self-Aligned to Conductor in Damascene Process" and has an internal Hewlett-Packard invention disclosure number of PDNO. 10014232 and was produced prior to the earliest prior art date of May 17, 2002 of U.S. Patent No. 6,716,644, issued to Nejad et al. This document describes the subject matter of the present patent application and supports that the claimed invention of the present patent application was conceived prior to May 17, 2002.

7. After conceiving the claimed invention of the present application, I diligently filed U.S. Patent Application Serial No. 10/679,564 as described in Paragraphs 8-17 below.

8. Invention Disclosure Record 10014232 was forwarded to the law firm of Dicke, Billig, & Czaja, PLLC on July 5, 2001 requesting a quote for preparation and filing of a U.S. Patent Application based upon Invention Disclosure Record 10014232. Description of Invention:

A. Description of the construction and operation of the invention (

An MRAM cell is constructed using the Damascene process to create both the bottom conductor and reference layer. First a trench is created in a dielectric layer, the trench is filled with conductor metal (Cu) and then lapped flat. The Cu is then recessed a prescribed amount. After that a reference layer is deposited into the recess and then lapped flat. At this point a barrier, sense layer and top conductor are processed on top of the pinned layer.

B. Advantages of the invention over what has been done before.

The self aligned pinned layer eliminates a masking step in defining the pinned layer and has the pinned layer patterned at minimum pitch (no loss in density associated with alignment process)

Write in Dark Ink on Front Side Only, Please

C. Problems solved by the invention.

- Simplifies MRAM fab process
- Increase density of MRAM arrays

D. Prior solutions and their disadvantages (if available, attach copies of product literature, technical articles, patents, etc.).

- Separate masks used for both pinned and sense layers
